Why 1.5 degree?

Tipping points

c) The extent to which current and future generations will experience a hotter and different world depends on choices now and in the near-term

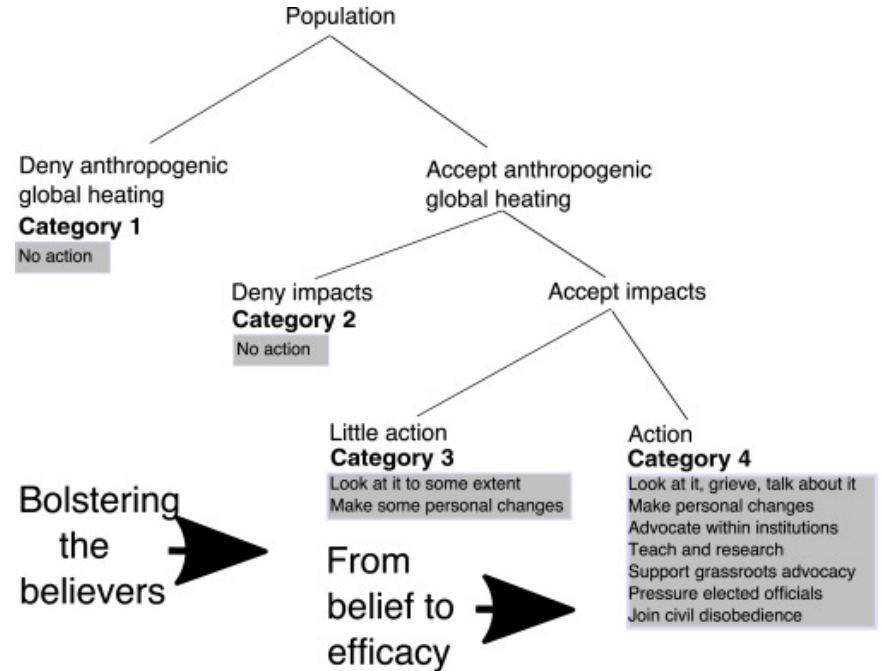

It's bad.

What can we do?

As individuals, citizens, scientists

Taxonomy of climate responses

- *denial* ('it won't be so bad')
- *defeatist* ('what's the point when China is emitting so much')
- *nihilistic* ('human beings suck anyway, we're all doomed')
- *exculpating* ('this is a policy problem')
- *technology-focused* ('devices will suck CO₂ out of the air')
- **efficacy** ('collective action can ripple and drive major societal and policy change')

Systems change in academia

The case of open science

Systems change in academia

Why should we (as scientists) care & act?

We

- have seen big social changes happen (open science, diversity)
- understand data (exponential processes, feedback loops, homeostasis)
- know something about human behavior
- are (mostly) respected and sometimes influential
- teach the next generation
- work in large organizations, from where change can percolate
- have a moral obligation (especially those of us with tenure)

"Yes, the planet got destroyed. But for a beautiful moment in time I had an h-index of, like, 27"

We can fix it.

Ok, where do I start?

What can *psychologists* do to help avert climate and ecological breakdown?

Resource use & open science

- Google: 100% renewable

- Amazon Web Services
 - currently 50% renewable
 - non-renewable storage offset (highly problematic)

How I quit neuroscience to focus on preventing climate breakdown

Shifting fields takes courage, but if a tenured professor can't take the leap to address the ecological emergency, who can, asks Adam Aron

Academics and 1in5

The 1in5 project

Most of us feel we don't have the time, expertise or chance to work on climate change and/or loss of biodiversity ("environmental change").

1in5 involves a *simple redirection of some existing efforts.*

Teaching

- incorporate climate in your existing teaching
- teach a course on climate psychology
- *Skepticism, belief and misinformation*
- *Risk perception, heuristics and biases*
- *Mental health and climate anxiety*
- *Behavior change*
- *Collective action, group dynamics and social tipping points*

The Psychology of the Climate Crisis

AUTHOR
Psych 278 @Stanford

PUBLISHED
June 17, 2023

Preface

This is an open book created by the students and instructors in "The Psychology of the Climate Crisis", a course taught in 2023 in the Department of Psychology at Stanford University by Professors Noah Goodman and Russell Poldrack.

Institutional advocacy

Operations (food, transport, buildings, purchases)

Banks, insurance, finance (S4F)

Pension funds (ABP)

Ties to fossil fuel industry

Climate education

**Academic
freedom
comes with
responsibility.**

Is it responsible to accept
money from firms that
fuel **climate disinformation?**

Come to the fossil ties debate.

OHBM Sustainability & Environmental Action Special Interest Group

BNA Green Neuroscience Prize

The BNA has declared a climate emergency and is taking action in response to raise awareness within the neuroscience sector of the urgent need to minimise the negative environmental impact of undertaking research, teaching and practice.

As part of this commitment, a new BNA prize is being launched in 2023 to recognise efforts in neuroscience aimed at reducing the environmental impact of research.

From belief to action

Putting things in practice

1. **Getting to know each other**

- Groups of 5-8 people
- How do you feel after this talk?

2. **Dreaming (5 minutes)**

- Vision, goals and possibilities
 - *What would you like to see changed?*

3. **Planning (15 minutes)**

- Identify actions
- Position on impact vs difficulty axes

4. **Acting (5 minutes)**

- Get started & find your community
- Pledge: what will you do *this month*?
